<p>Recently, I often hear of Dr. Lisa Randall's 5-dimensional theory.</p> <p>I have not yet learned it very well. So I can not say if it is new and hits the truth. I expect so because she is professor of theoretical physics at Harvard University. I wonder how Steven Weinberg thinks of it. I feel that even when her theory is new and hits the truth, her explanation for citizens is not very good. For she explains everywhere how a world of more than three dimensions is, and she emphasizes the newness of 5-dimensionality.</p> <p>The explanation of a world of more than three dimensions is trite because it has been done for Einstein's 4-dimensional theory for many years. It can easily be seen in many popular books of science. Also, 5-dimensionality itself is not new because famous Kaluza-Klein theory took it. She should explain the essence of her theory which can not be seen neither in Einstein's theory nor in Kaluza-Klein theory even for non-professional citezens. I expect that it is a subtle modeling.</p>
